Words like “sustainability”, “environmentally friendly”, “prohibited substances”, are now part of tanner’s vocabulary. It’s not just a way of saying but a practical need of our time.

FGL International is on the front line together with the tanners around the world, to help them with the difficult task of producing eco-friendly leather.

After the success of Releasys - the metal free tanning process - and Permasol TFR - which drastically reduces formaldehyde - FGL International offer a new range of products, the “ZERO” INNOVATIVE SERIES of products includes 7 products that allow any tanner to be able to reproduce any type of leather completely free from formaldehyde and phenols.
